Dear sir/ madam

I have just received an email regarding
Planning applications for a 22.5 meter telecom mast directly behind my property. Im writing to say that im objecting to this mast. the effects that this would make the noise from the cabinets around the bottom. We live about 60 meters away from this proposed site and my wife relies on an insulin pump that keeps her alive and she is not permitted to go through the xray machine at the airport so with this in mind the waves from the mast would likely to have bad effects to her operation of her pump. yes you may say that it's not been proven yet but would you really play with someone's life by letting this go ahead hopefully you come to the right decision on this . Also the entrance to the site proposed is on a main road where I don't think that there is enough clear view both way to exit in time . Now to the wildlife around the area there is so much around the place from deer foxes badgers and more . And as this is a mast directly for the Mainline railway why does it have to be near homes as it would in my opinion it would really spoil the view around the area let alone from my garden .and as there is now planning for a mast just down the road around Wivelsfield train station why does it now need for another one within 1 mile . So I really do hope that someone will take all of this into consideration but most and foremost is my wife with her pump .

Regards
