Comments Details

Commenter Type:	Neighbour or general public
Stance:	Customer objects to the Planning Application
Reasons for comment:	
Comments:	I request that this application be rejected. 5G relies on line of sight, therefore there will be many more of these towers going up, there is an application in Worlds End and another near Brighton, these are all very ugly and over powering with very little evidence that peopler investigations have been

done regarding the dangers to the environment, to local wildlife & to us human beings. There are many many very reliable investigation out there showing the negative impacts, cancer breakouts near to the masts, destruction of wildlife, noise pollution and of course how overpowering they are. They make very little impact to phone signal, if you stand near one it doesn't improve signal despite it flashing up on the phone screen. It causes massive stress to people to see these going up everywhere, I know of many people scared by the invasion of technology on our lives & the sudden need for such towers when we've coped without them up to now, there is a massive rise in cancers currently, turbo ones where people are diagnosed and passed within months, how can we be sure this isn't attributed to the cell towers being erected everywhere there's a spare bit of green land. The installation rates jumped from 2020. Why would anyone want the beautiful green spaces of Sussex covered and ruined by all these towers?

I would request that this is rejected until it's proven that the wildlife and effect on human health isn't impacted by these monstrosities.

To be clear, I object to the proposal.

Kind regards
