Comments Details

Commenter Type:	Neighbour or general public
Stance:	Customer objects to the Planning Application

Reasons for comment:

Comments:	I understand the installation of an Abattoir can have serious detrimental affects on the surrounding environment, so I have concerns. These are some of the negative environmental aspects: 1. Water pollution - Wastewater containing blood, fat, and chemicals can contaminate rivers, streams, or groundwater if not treated properly.
-----------	--

2. Air pollution and odours - Strong smells from animal waste and processing can affect air quality and make the surrounding area unpleasant.
3. Noise pollution - Machinery, transport trucks, and animal noises can disturb nearby residents.
4. Solid waste - Animal remains and other waste products can attract pests such as flies, rats, and stray animals if not managed properly.
5. Greenhouse gas emissions - Operations and transport produce carbon dioxide, while animal waste can release methane, contributing to climate change.
6. Soil contamination - Improper disposal of waste can pollute the soil with organic matter or harmful substances.

Will the council make sure the above is fully considered when looking at the application and that any operation if approved meets modern environmental controls?

I understand that many regulated abattoirs use wastewater treatment systems, odour control measures, and proper waste disposal to reduce their environmental impact.. what is the proposal for this pending site ?

In addition the surrounding infrastructure needs to be robust to withstand and accommodate such controls & measures, therefore can the Council /water authorities guarantee that the location and infrastructure is sufficient to accommodate this set up without risk to the environment and local area?

Kind regards
