Comments Details

Commenter Type:	Neighbour or general public
Stance:	Customer objects to the Planning Application
Reasons for comment:	
Comments:	Dear Councillors I object to the application to install an industrial slaughterhouse at Naked Farm. The application risks causing Significant Environmental Impact on air, water and soil. *Air Impact* The application fails to provide a foolproof Odour Management

Plan at all.

Environmental Health officers should be concerned by the Flawed Containment and Significant chance of Odour Escape. This will impact residential amenity and air quality.

Roller shutter doors, by their very nature, must be opened frequently for loading carcasses and removing animal waste, allowing unmitigated, noxious odours to escape directly into the surrounding area.

This represents an unacceptable risk to the residential amenity of local properties and nearby trails.

Water and Soil Impact

If approved, the slaughterhouse will create Biowaste and Effluent which have not been accounted for in terms of drainage and disposal.

Pollution control and protecting local watercourses should be a main priority for the community.

An on-site slaughterhouse would generate highly concentrated, hazardous trade effluent (blood, fats, washdown chemicals). The applicant has not demonstrated that the existing rural drainage infrastructure can safely handle or contain this biowaste without threatening local water tables, nearby ancient woodland, or watercourses.

Until independent, rigorous drainage and Environment Agency assessments are provided, permission must be refused.

Thank you for your attention to these significant risks.

Kind regards
