RE: BURGESS HILL – PORT ON PRE-TREATMENT AND DISPOSAL FROM PHASE 2 AREA

Dear Steve,

Please find below a summary of the recent processing and disposal works undertaken at the Burgess Hill Phase 2 site.

Introduction:

Soilfix Limited (Soilfix) were commissioned by Countryside Properties (UK) Limited (Countryside) to undertake;

- Controlled scrape of four hotspots of shallow unsuitable made ground previously identified by IDOM; and
- Processing and removal off site of two stockpiles containing asbestos fragments unsuitable for reuse on site.

Soilfix's works commenced on 23rd August 2021 and were completed on 7th September 2021.

Drawings of the site, excavation and stockpile locations are included in Appendix A.

Photographs of the works are included in Appendix B.

Site Description & Background:

Remediation has been previously completed within the Phase 2 area of site. Remediation was carried out by Sanctus on behalf of Homes England with the objective of delivering a clean site for onward development by Countryside. Following post-clearance verification testing by IDOM Merebrook it was established that some limited remedial actions were still required in localised areas in the former farm fly-tipped area. This additional work included the removal of stockpiles of unsuitable material that remained on site, removal of unsuitable shallow soils in three areas where unsuitable made ground (with inclusions of plastic brick, glass) remained, and removal of an additional area where asbestos fibres were detected.

A drawing from IDOM Merebrook's Land Contamination Assessment report (Jan 2021) in Appendix A shows the locations of the hotspots. Drawing 2185-1 in Appendix A showing the two stockpiles requiring removal (SP1 and SP2), the three hotspots of unsuitable made ground (MHP305, MHP315 and MHP316) and the additional area where asbestos fibres were identified (MHP308).

The report by IDOM Merebrook detailing the required works is:

- Summary Land Contamination Assessment, January 2021, CLA-21949D-20-276

Site Works Objectives:

The objectives of Soilfix's site works were as follows:

- Process the two stockpiles to remove visible asbestos fragments and oversized material to provide a reduced disposal cost of the soils to the client;
- Removal off site of the picked asbestos fragments and over-sized materials; and
- Scrape any visible made ground from the four hotspots (for processing and removal off site) and carry out a watching brief while scraping across the MHP308 area to pick and remove any visible asbestos.

Description of Works

Access to the Phase 2 works area was across a temporary bridge installed by Coinford at the north end of Freeks Lane.

Processing and removal off site of the stockpiles

The processing and disposal of the stockpiles are detailed below.

- Prior to works commencing a pre-start survey of the site was carried out. See Drawing 2185-1 in Appendix A. Volumes of SP1 and SP2 were measured as 448 m³ and 864 m³ respectively. The areas of the unsuitable made ground and potential asbestos area were marked out on site.
- A welfare and parking area were set up, segregated from the rest of the site by heras fences.
- A baseline monitoring visit for airborne asbestos fibres was carried out before any excavation works began. No fibres were detected. Certificates are provided in Appendix F.
- The shrubs and greenery from the top of both stockpiles were carefully scraped off and left stockpiled to one side to rot down, as agreed with the client.
- A processing area was prepared to the south of the area by the haul road. Grass was scraped off leaving the natural clay beneath. This was also where the processed soils were subsequently loaded to lorries. An asbestos decontamination area was set up next to the processing area.
- Stockpile SP1 and SP2 soils were transferred to the processing area by rear tipping dumper.
- The stockpile soils were riddled to remove any over-size materials eg. brick, concrete and plastic. Over-sized materials were stockpiled separately.
- A watching brief was carried out by trained asbestos operatives to hand pick any visible asbestos fragments during the riddling process. Asbestos fragments were hand picked, double bagged and stored in an asbestos-only lockable bin.
- The polythene liner beneath both stockpiles was removed and disposed of off site. Natural ground was present beneath both stockpile areas.
- Dust suppression was carried out throughout the works using hose pipe and towable dust suppression bowser when required.

- A second airborne fibre monitoring visit was carried out during the processing works. Six air samples were recovered from the boundary of the works area. Certificates are provided in Appendix F. No asbestos fibres were detected during this monitoring.
- 8-wheeled tipper lorries were used to transport the processed soils offsite under Duty of Care. 134 loads of soil and 2 loads of oversized concrete (approx. 1,340m³) were disposed of off-site. Waste transfer notes for the soils are provided in Appendix C
- The bagged asbestos waste was collected at the end of the works by specialist hauler and disposed offsite under Duty of Care. A Hazardous Waste Consignment note for the asbestos is provided in Appendix C
- Two skips of general waste including the polythene from beneath the stockpiles was disposed off site. Duty of Care tickets provided in Appendix C.
- The Freeks Lane track was repaired of small depressions at the end of each day and on completion.
- The base of the processing area was scraped to the natural clay to remove any processed soil and made ground.
- IDOM visited the site on 2nd September and carried out visual verification to confirm that the two stockpiles had been removed to leave natural ground in these areas.

Hot spot excavation works

- Shrubs and grass were carefully removed from the three made-ground areas and one potential asbestos area to avoid mixing made ground with the organic material.
- Minor areas of shallow made ground were observed in areas MHP305, MHP315 and MHP316. This made ground was scraped down approximately 100mm until natural ground was encountered. This made ground was moved to the processing area for processing and offsite disposal.
- A careful inspection of the potential asbestos area MHP308 was carried out to see if any visible asbestos fragments were present. No asbestos was observed and there was no made ground present in this area either.
- IDOM Merebrook carried out an inspection of the hotspot areas on 2nd September. This information will be reported separately by IDOM Merebrook.
- As requested by the client, the shrub and grass organic material scraped off from the hotspot areas was placed back in these areas to reinstate on completion.

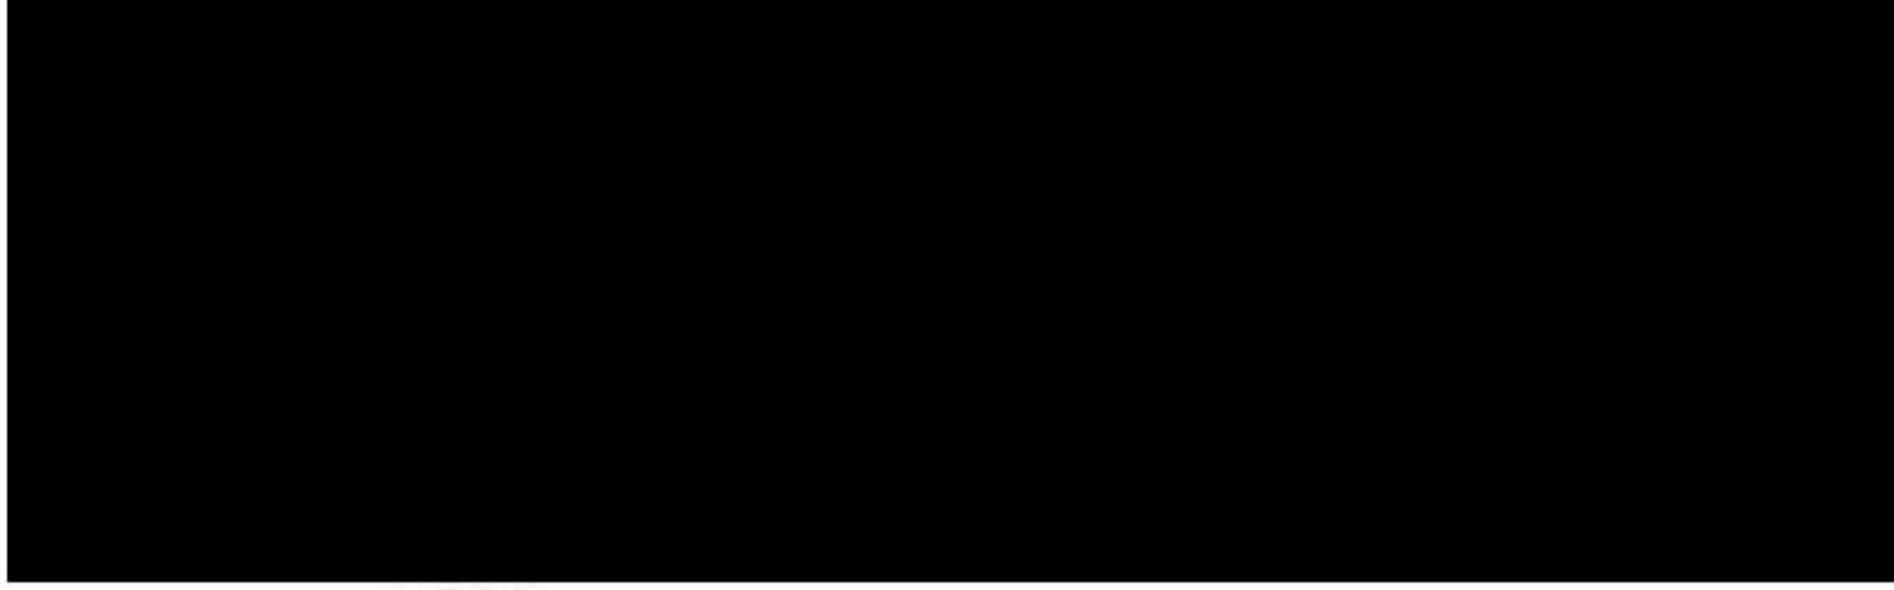

An as-built survey was carried out once all works had been completed, see Drawing 2185-2 in Appendix A

A photograph log of the processing and excavation works is provided in Appendix B.

We trust the above meets with your approval. Please let me know if you have any queries.

Yours sincerely

For and on behalf of Soilfix Limited

Jim Hayward

Project Manager
