

Planting details for 103 Iden Hurst BN6 9XZ

The planting plan below will be completed prior to Spring (April 2026).

A full border flower bed will be dug along the entire length of the fence. This will be filled with good quality compost, with bark chippings on top as used around the rest of the development.

A selection of Hebe shrubs will be planted along the entire length of the fence, planted at approximately 1 meter intervals to allow for growth.

A jasmine climber will be planted at the front section of the fence to lessen the visual impact of the new fence panel. This will include support wires or a wooden trellis in the same style as used at the front of our house.

We agree that we will regularly tend to all the new plants and replace any that become damaged or diseased within a period of 5 years.
