Subject: DM/25/0117 - To upgrade the lighting infrastructure by installing energy-efficient LED ClearFlood units on existing lighting posts within the car park.
Attachments: IMG_7282.jpg, IMG_7285.jpg, 715 AL110A.pdf

Dear Mr Watt,

I hope you are well.

The applicant has informed me that the ClearFlood light has been installed, though they are not being operated at this time. The installers opted to mount it on the bar supporting the existing floodlights rather than at the top of the existing lighting posts, as originally advised. I have therefore attached an updated elevation showing the installed position of the floodlights.

I have also reviewed Emily Wade's comments online. Please find attached images taken on-site with the light both activated and deactivated. I have witnessed the activation of the light and can confirm that there is no light spillage onto the adjacent buildings. The resulting lighting marginally increases the lux levels in the parking spaces, paths, and access road, bringing them up to the minimum levels required for the safety of students and other pedestrians.

Please let me know if you require any further information or clarification.

Kind regards,
Danny
