

APPENDIX A – PHOTO EVIDENCE SUPPORTING OBJECTION

Planning Application DM/26/0134 – 12 Barons Court, Burgess Hill

This appendix contains photographs taken from inside my home and from my rear garden to illustrate the existing relationship with No. 12 Barons Court and the areas of sky, openness, and sunlight that would be lost as a result of the proposed two-storey side extension.

Indoor Photos

Photo R1 – Reception Room View

View from the main reception room showing the narrow but important area of open sky to the left of No. 12. The proposed extension would reduce this openness and create a more enclosed outlook from this principal living space.

Photo K1 – Kitchen Window (Primary View)

View from the first kitchen window showing the limited sky gap to the left of the neighbouring house. The proposed extension would sit directly in this line of sight, reducing sky visibility.

Photo K2 – Kitchen Window (Wider Context)

View from the second kitchen window showing the full rear outlook. The proposed extension would occupy this remaining open aspect, increasing enclosure.

Photo B1 – Main Bedroom View

View from the main bedroom showing the modest but valuable area of open sky currently visible to the left of No. 12. The proposed extension would be brought significantly closer, reducing sky visibility and blocking evening sunlight.

Photo S1 – Bedroom 4 / Home Office View

View from Bedroom 4, used daily as a home office. The extension would remove much of the remaining open aspect and sky view, resulting in a more enclosed outlook throughout the working day.

Garden Photos

Photo G1 – Patio Level (Main Amenity Space)

View from the main patio area at the lower garden level, showing how the neighbouring house already appears tall and dominant from this position. The photo illustrates the limited openness currently available and the close relationship between the properties.

Photo G2 – Grass Area (Evening Sun)

View from the grass area where we sit for late-day and evening sun. The photo shows the remaining area of open sky that allows evening sunlight to reach this part of the garden, which would be reduced by the proposed extension.
