To whom it may concern,

I would like to register my support of this proposal.

Whilst it does not directly impact me personally, I do live on the Tobias site and I know this area of the communal gardens well. When we first moved onto the site in 2017 this area was lovely and bright during the summer months. Now the garden is cold and dark even during the summer months and I know that this adversely affects those who live in the ground floor flats which face the garden.

To return the light back to anything approaching the levels that existed 8 years ago would immeasurably improve the lives of those people living in the ground floor flats and make that garden a pleasant useable space during the summer months.

Thank you for your consideration.

Kind regards,

[REDACTED]
