Subject: Application No: DM/25/0589 - proposed installation of 30 meter lattice tower - letter of objection

[REDACTED]

Dear Hamish

I am writing to express huge concern around the proposed erection of a 5G mast very close to my property in our local area. While I understand the importance of advancing our technological infrastructure, I believe it is crucial to consider the potential impacts on our community including health and environmental factors.

There are ongoing debates and studies regarding the health implications of 5G technology. Many residents, including myself, feel very concerned about the long-term health effects of exposure to electromagnetic radiation. Reports have suggested potential links between such radiation exposure and various health issues, including sleep disturbances, headaches, and other more severe conditions. This not only impacts on people's physical health but also their mental health.

Additionally, the installation of a 5G mast would have huge visual effects, shadows and vast environmental consequences. The presence of large masts will significantly alter the visual landscape of our neighborhood, potentially diminishing the charm and character that we all cherish with the surrounding nature filled green land. It would impact significantly on local wildlife and ecosystems. The introduction of such infrastructure would disrupt habitats and have unforeseen consequences on bats, birds, newts and all wildlife including the flora and fauna that make our area unique. Studies have shown that electromagnetic radiation can affect bird navigation and disrupt insect populations, which are crucial for pollination and maintaining ecological balance.

I strongly urge the authorities to engage with the community more and look for alternative solutions that balance technological progress with the well-being and preferences of local residents. Open dialogue and transparency are key to ensuring that any decisions made are in the best interest of everyone involved. In addition, I would also like to point out that very few homes were included in the letter from the council around the planning application which is concerning. Community input and feedback should be actively sought and considered throughout the decision-making process.

Thank you for taking the time to read my concerns. I look forward to hearing from you and discussing this matter further.

Kind regards,
