

Supporting Statement for changing the roof structure of our outbuilding

We would like to change the roof structure plan of our outbuilding/gym from a pitched roof with a height of 4.2m, to a flat roof of 3.6m.

This will allow us to put solar panels on the whole roof, rather than just the south facing side.

To comply with regulations, and have less of an impact, we will move the building to 2m away from the boundary with Neston.

Further than the previously agreed 1m and 1.5m.

The building will have a lower height, and be further away from the neighbours boundary, therefore lowering the overall impact on our neighbours.

We hope that this will be well received by the planning authority.

Thank you for your time reviewing this supporting statement.
