ref. DM/25/0589

I object to the erection & works relating to the 30 metre, 9 antennae mast proposed on the land west of the railway line at wivelsfield, north of leylands road. It is not visually conducive to the locality or the land use as a designated nature reserve, it is not in keeping with the Will/ wishes of the landowner/ farmer who bequeathed the land of bedelands to be used for local people to enjoy the nature there. In fact the radar frequencies are greater than the local bat population can overcome and they will succumb to hyperthermia/ due to the interruption in their echo location they will not find their roosts or feed effectively. The thermal activity caused by the electricity supply cables and the generator will render the insect population sterile in the whole area that the cables extend along, depleting bat, bird, mammal (badger, fox, water vole, hedgehog) and raptor (buzzard) food supply therefore reducing the biodiversity of a currently very bio-diverse piece of land. The need regular for maintainance visits to the sight will also increase traffic to an area designed for footfall only. The noise will also impact bird activity. It is also on a migratory pathway for geese who head south each September.
